
VisionFlow – Project Management System Blueprint

1. Project Overview

VisionFlow is a role-based Project Management System designed to streamline project planning, task assignment, progress tracking, and collaboration.

Built with **React** (frontend) and **.NET Core + PostgreSQL** (backend & database), VisionFlow empowers organizations to manage projects efficiently while maintaining clear role-based permissions.

2. Core Objectives

- Provide a **centralized platform** for project & task management.
 - Implement **multi-role access control** (Sr. Manager, Manager, Developer/Employee).
 - Enable **real-time collaboration** and progress tracking.
 - Offer **scalable and customizable** workflows for different organizations.
-

3. Role Structure & Responsibilities

1. Senior Manager

- Create, Edit and Delete **Projects**.
- Assign and Reassign **Managers** to projects.
- Track **project status**

2. Manager

- View assigned Projects.
- Create, Edit and Delete multiple tasks in a project.
- Assign and reassign tasks to **developers/employees**.
- Track **task status**.
- Add comments in the common discussion area (for projects with sr manager and for tasks with employee)

3. Developer / Employee

- View assigned tasks.
- Update **task status**.
- Add comments in the common discussion area(employee and manager).

4. Workflow Overview

1. **Project Creation** – Sr. Manager creates a new project.
 2. **Manager Assignment** – Sr. Manager assigns a Manager to the project.
 3. **Task Breakdown** – Manager divides the project into tasks.
 4. **Task Assignment** – Tasks are assigned to Developers/Employees.
 5. **Execution & Updates** – Developers work on tasks and update status.
 6. **Progress Tracking** – Managers & Sr. Managers track real-time progress.
 7. **Completion & Review** – Project is marked as completed and reviewed by manager and then by sr. manager.
-

5. Tech Stack

- **Frontend:** React (Hooks, Redux), TailwindCSS
 - **Backend:** .NET Core 8 (Web API)
 - **Database:** MySQL
 - **Authentication:** JWT-based authentication
 - **Hosting:**
 - **Version Control:** GitHub
-

6. Future Enhancements

- Mobile app version (React Native).
- AI-powered task suggestions & deadline predictions.
- Advanced time-tracking with automated productivity insights.
